- Mobile hamburger style down hamburger menu built with SCSS

- hamburger and cross icon made using 3 spans. They activate a checkbox when clicked that animates the top and bottom span to rotate 45 degrees and the the centre span to not display.

- The menu is also animated to it's visible position from behind a div that blocks the bottom of the form when animated up, out of view

- Had to use Z-indexing extensively to make it function properly. Had issues with the page container element
